Array Networks Announces Windows 7 Certification for SSL VPN

Also introduces 50% performance increase for Layer 3 VPN

MILPITAS, CA – November 4, 2009 – Array Networks Inc., a global leader in secure application delivery, today announced its SSL VPN solution has certified Windows 7 support. Additionally, Array announced a significant increase in Layer 3 VPN performance for its SPX Series Universal Access Controller (UAC).

With Microsoft certification, Array customers are able to utilize Windows 7 while maintaining secure remote access anytime, from any location. Array's SSL VPN now includes certified, signed drivers for Microsoft's Windows 7 Operating System. Array worked within Microsoft's certification program to release this update in conjunction with Microsoft's retail release of Windows 7. In addition to Windows 7 support, this release also features support for Mac OS X 10.6, also known as "Snow Leopard".

Moreover, Array has upgraded Layer 3 performance for its SPX Series UAC. Users can now experience an overall 50% performance improvement for SSL-encrypted traffic in both LAN and WAN environments. With these upgrades, Array's SPX enterprise customers can boost the productivity of their remote workers.

"With the rise of remote workers and after-hours employees, enterprises need to provide remote users more than just basic VPN access to webified applications," said Sunil Cherian, VP of Product Marketing for Array Networks. "With our latest upgrade of SPX, remote employees receive the benefits of secure, high-speed, full network-level connectivity, even on Windows 7, Microsoft's latest operating system."

Array Networks SPX Series Universal Access Controllers are highly flexible and support a variety of access products. The SPX UAC allows organizations to support multiple business units, partners, customers, and up to 256 separate SSL VPN virtual customized portals on a single hardware platform. Additionally, Array's Layer 3 VPN enables transparent SSL-based network-level connectivity across the WAN to existing network infrastructure, providing seamless integration even through firewall infrastructure, without any need to manually download or install clients.

These capabilities are currently available in ArrayOS SPX 8.4.3 and higher.

About Array Networks
Founded in 2000, Array Networks is a global leader in enterprise secure application delivery and universal access solutions for rapidly growing SSL VPN and application acceleration markets. More than 3,000 customers worldwide – including enterprises, service providers, government and vertical organizations in healthcare, finance, insurance and education – rely on Array to provide anytime, anywhere secure and optimized access.

Industry leaders including Deloitte, Red Herring, Gartner, and Frost and Sullivan have recognized Array as a market and technology leader.
