EVOTEK to Offer New Network Functions Platforms from Array Networks to Customers Focused on Multi-Cloud Solutions

ADC, WAN optimization and SSL VPN with guaranteed performance are now available from fastest-growing solution provider in IT

Milpitas, CA – November 7, 2017 – EVOTEK, North America's premier enabler of digital business, is partnering with Array Networks to offer new Network Functions Platforms. Through EVOTEK, its customers will have access to Array Networks' broad product portfolio, which includes Array's new line of Network Functions Platforms, as well as application delivery controllers (ADCs), SSL VPNs and WAN optimization.

Array's recently launched AVX Series Network Functions Platform will be included in EVOTEK's line-up of Array solutions. The AVX Series is a line of purpose-built, virtualized hardware systems designed for multi-tenancy and engineered to host multiple Array and third-party virtual application delivery, networking and security functions while maintaining guaranteed performance.

EVOTEK will also offer APV Series application delivery controllers, which ensure performance of applications, websites and cloud services thanks to SSL acceleration, caching and Layer 7 scripting. In addition, the AG Series secure access gateways guarantee secure remote access, thanks to SSL encryption and multi-factor authentication. Lastly, aCelera WAN optimization controllers support up to 100,000 simultaneous TCP connections with a non-blocking data throughput of 1Gbit/s, thereby significantly reducing latency and response times. All products are immediately available through EVOTEK as either physical or virtual appliances.

"EVOTEK addresses a changing technology landscape, aiming to connect the business side of digital transformation with the underlying technologies," said Ned Engelke, CTO of EVOTEK. "Our partnership with Array Networks is an important piece to this puzzle, giving our customers access to a full range of application delivery and security products, as well as a forward-looking platform for enterprise NFV adoption."

"EVOTEK was recently ranked as the fastest-growing solution provider in the IT industry by CRN, and we're excited to help them continue their rate of rapid growth," said Paul Andersen, VP of Sales and Marketing at Array Networks. "EVOTEK joins a growing list of distributors, integrators and value-added resellers that are adding Array's new Network Functions Platform to their solutions portfolio."

About Array Networks
Array Networks, the network functions platform company, develops purpose-built systems for deploying virtual app delivery, networking and security functions with guaranteed performance. Headquartered in Silicon Valley, Array is poised to capitalize on explosive growth in the areas of virtualization, cloud and software-centric computing. Proven at over 5000 worldwide customer deployments, Array is recognized

by leading analysts, enterprises, service providers and partners for next-generation technology that delivers agility at scale. To learn more, visit: https://www.arraynetworks.com.

About EVOTEK
EVOTEK is North America's premier enabler of digital business with a focus on innovation. With technology offerings in both data center and cloud, EVOTEK is uniquely equipped to enable customers with the industry shift from traditional IT computing to multi-cloud. With services practices in security, mobility, and DevOps, EVOTEK is quickly moving up the value chain, closer to the part of digital business that matters most. In both 2016 and 2017, EVOTEK was named to The San Diego Business Journal's Best Places to work and recognized in CRN's Solution Provider 500 list.
